The Cylinder Class API

public static double getPosNum ()
    Gets and returns a user-input positive real number. Gives the user as many chances as necessary to input a positive number.

public static double volume (double radius, double height)
    Calculates and returns the volume of a cylinder with the specified radius and height.

public static double area (double radius, double height)
    Calculates and returns the surface area of a cylinder with the specified radius and height.
